PROFESSIONAL SUMMARY

Business operations and partnerships professional with a decade at Yonsei University running the operational cadence across 100+ institutional partnerships, owning reporting, data accuracy, and the systems that keep complex pipelines running. I turn messy, manual processes into structured, measurable systems, and I build the tooling myself rather than waiting for someone else to. At Yonsei University's Office of International Affairs, I redesigned core workflows with lightweight automation and AI tooling, cutting weekly email processing from 25 to 8 hours and reducing a key data-hygiene workflow by 83 percent. I build dashboards and recurring reports (Google Apps Script, Flask, React, D3.js, Tableau), prepare leadership-facing materials for decision-making, and partner cross-functionally under high-stakes deadlines. I am currently pursuing an M.S. in AI Computing.

PROFESSIONAL EXPERIENCE

Yonsei University — Seoul, Korea

March 2016 – Present

Europe Region Exchange Program Manager

Office of International Affairs

September 2025 – Present

- Ran the end-to-end operational cadence for exchange programs across 105+ European partner institutions as the Europe region lead, owning everything from partner agreements and nominations through reporting and process improvement.
- Redesigned core administrative workflows through automation, cutting email processing from 25 to 8 hours per week and reducing a key data-hygiene workflow by 83 percent, freeing the team to focus on judgment-driven work.
- Built and maintained reporting and dashboards for real-time visibility into nominations, applications, and partner data, the operational equivalent of pipeline and account tracking, across a 27-column institutional database, improving data accuracy and decision-making speed.
- Translated manual, ad hoc processes into structured, measurable systems using lightweight tooling (Google Apps Script, Flask, React, LLM APIs), getting into the weeds and shipping solutions hands-on rather than outsourcing them.
- Led the 7-week operational plan for President Emmanuel Macron's special lecture at Yonsei (April 2026), preparing leadership-facing materials and coordinating cross-functionally with the Élysée Palace, the French Embassy in Korea, and presidential security; the event generated 169 domestic press mentions and was featured on the Élysée's official YouTube channel.
- Drove partner and alliance execution: concluded a new MOU and Student Exchange Agreement with Université Paris 1 Panthéon-Sorbonne, maintained partner data hygiene and joint-planning logistics, and gathered regional market intelligence at the 2025 EAIE conference (Sweden, Norway, France).

Deputy Manager

Office of International Affairs

January 2024 – August 2025

- Owned the recurring seasonal operations for Yonsei International Summer School (YISS) and Winter Abroad at Yonsei (WAY) end to end, spanning invoicing, HTML email campaigns, registration data hygiene, and academic-calendar communication.
- Planned and ran the YISS/WAY 40th-anniversary program; produced the anniversary theme song with Suno AI and drove the social media campaign to 110K+ views.

Administrative Office Coordinator

Underwood International College & Graduate School of Theology

March 2016 – December 2023

- Awarded a Ministry of Education commendation (December 2023) for excellence in international student recruitment and program management.
- Led recruitment and management of international master's and doctoral students for the Global Institute of Theology (GIT), owning the applicant pipeline end to end.
- Managed day-to-day operations for international faculty and students at Underwood International College.

Staff, Fuel Resources & Coal Team

Procurement Office, Korea Midland Power (KOMIPO) — Seoul, Korea

April 2014 – March 2016

- Enhanced the SCM system for coal imports and fuel procurement in a finance-adjacent, data-driven environment, designing and improving operational processes.

EDUCATION

M.S. in AI Computing

Graduate School of Computing, Yonsei University

September 2025 – Present

- Team project: RAG-based search system for exchange-student experience reports (in progress).
- Member and audit committee member, AI Convergence Society; presented the ReAct paper and a case study on an email-triage system.

B.A. in French Language and Literature

Yonsei University

March 2007 – August 2013

TECHNICAL SKILLS

Operations & Analytics: Reporting & Dashboards · KPI Design · Process Automation · Data Hygiene & Verification · Cross-functional Coordination

AI / Development: Python · Flask · Google Apps Script · LLM APIs · AI agent tooling · React · TypeScript · D3.js

Tools: Google Sheets · Excel · Tableau · Google Workspace · Notion · Canva

SELECTED PROJECT

- **OIA Rush** — Built a hypercasual web game depicting a virtual 6-floor office staffed by 15 AI assistants, translating multi-agent workflows into an interactive experience (sachoi.netlify.app).

AWARDS & RECOGNITION

- Peer-Nominated Outstanding Employee Incentive Award (February 2026), Yonsei University.
- Ministry of Education Commendation (December 2023) — international student recruitment and program management.
